Rapid Glass Atx

What is Smart Film?

Smart Film is a window tint that is placed over your current windows, that allows you to control the transparency remotely.

Remote Controlled

With its ability to be controlled by a remote, or phone, Smart Film can provide privacy at the press of a button.

Versatility

Unlike blinds or curtains, Smart Film can be placed on any glass and go unnoticeable. Being able to be used whenever you'd like, while still being hidden in plain sight.

Aesthetics

Aesthetics - Its ability to switch between transparent and opaque states can create dynamic visual effects and add a sense of sophistication to interiors.

Bubbles

After Installation, there may be a few bubbles. This is caused by trapped air in between your glass and the film. They should go away within 48 hours. If the Don't, reach out.

Cleaning

Only use Water or 99% Isopropyl alcohol for glass with a micro fiber cloth.

Usage

Do Not leave the film in "ON" position for longer than 36 hours consecutive.

After Care
